

HyaPenPro - Innovative Non-Invasive Lip Filler Treatment

HyaPenPro is the market-leading hyaluronic acid lip filler device, specifically designed for safe, uniform, flawless and pain-free lip volume enhancement without the use of needles.

HyaPenPro delivers hyaluronic acid into the lips using air pressure and therefore does not pierce the skin or create trauma. This means no pain, no social downtime and no risk for the customer. The HyaPenPro device delivers hyaluronic acid in 0.01 ml actuations, making it the most accurate and precise lip filler treatment available on the market. The results - volumised and contoured lips, without the risk, pain, downtime or needles!

What are the benefits of using HyaPenPro over traditional lip fillers?

Filler quickly smooths and spreads

With HyaPenPro the filler spreads throughout the lips smoothly and settles within 2 to 5 days, unlike injectable lip filler which can take up to 20 days to settle.

No swelling or bruising

With HyaPenPro bruising and swelling are very rare, whereas, with injectable lip fillers lumps, bumps and cysts are all very common, as is swelling and bruising.

Pain and needle-free treatment

With HyaPenPro the treatment is pain and needle-free, with no need for anaesthetic. Whereas injectable lip fillers are often very painful and require anaesthetics that can cause allergic reactions.

Minimal social downtime

After a HyaPenPro lip filler treatment, you can get back to work or your social life straight away with absolutely no downtime. Whereas injectable lip fillers can result in extensive social downtime of up to 2 weeks, whilst the treatment heals.

HyaPenPro - Innovative Non-Invasive Lip Filler Treatment
